Thinking of fixing your mortgage?

The pros and cons of moving off your Standard Variable Rate.

The matter of trusts

Making sure your life cover goes to the right people at the right time in the right way.

Don't crowdfund the cost of your healthcare A critical illness plan could help

A critical illness plan could help you avoid financial hardship when you need it most.

Thinking of fixing your mortgage?

If you think an increase in your mortgage repayments could have a negative impact on your lifestyle or financial wellbeing, you may want to consider fixing your mortgage.

Don't be drawn into trying to second guess what will happen with interest rates over the coming years. We can help you come to the most appropriate decision for your next mortgage. With a fixed rate mortgage, your payments are set at a certain level for an agreed period, regardless of whether your lender changes its Standard Variable Rate (SVR). Such an increase typically occurs when the Bank of England Base Rate starts to climb.

Fixed rate mortgages can offer protection from rate rises for an agreed period, but there are several considerations you'll need to think about before making your decision.

Predictable repayments – but you won't benefit from rate cuts

With a **tracker** mortgage, your monthly payment fluctuates in line with a rate that's equal to, higher, or lower than a chosen Base Rate (usually the Bank of England Base Rate). The rate charged on the mortgage 'tracks' that rate, usually for a set period of two to three years.

Tracker rates might be more appealing if you don't have a fixed budget and can tolerate higher mortgage payments if rates rise, whilst being able to benefit from reduced monthly mortgage payments if rates go down.

But with a **fixed rate** mortgage, the rate (and therefore your repayments) will stay the same for an agreed period. A fixed rate mortgage makes budgeting much easier because your payments will not change – even if interest rates go up. However, it also means you won't benefit if rates go down.

Longer fixed terms will be more expensive

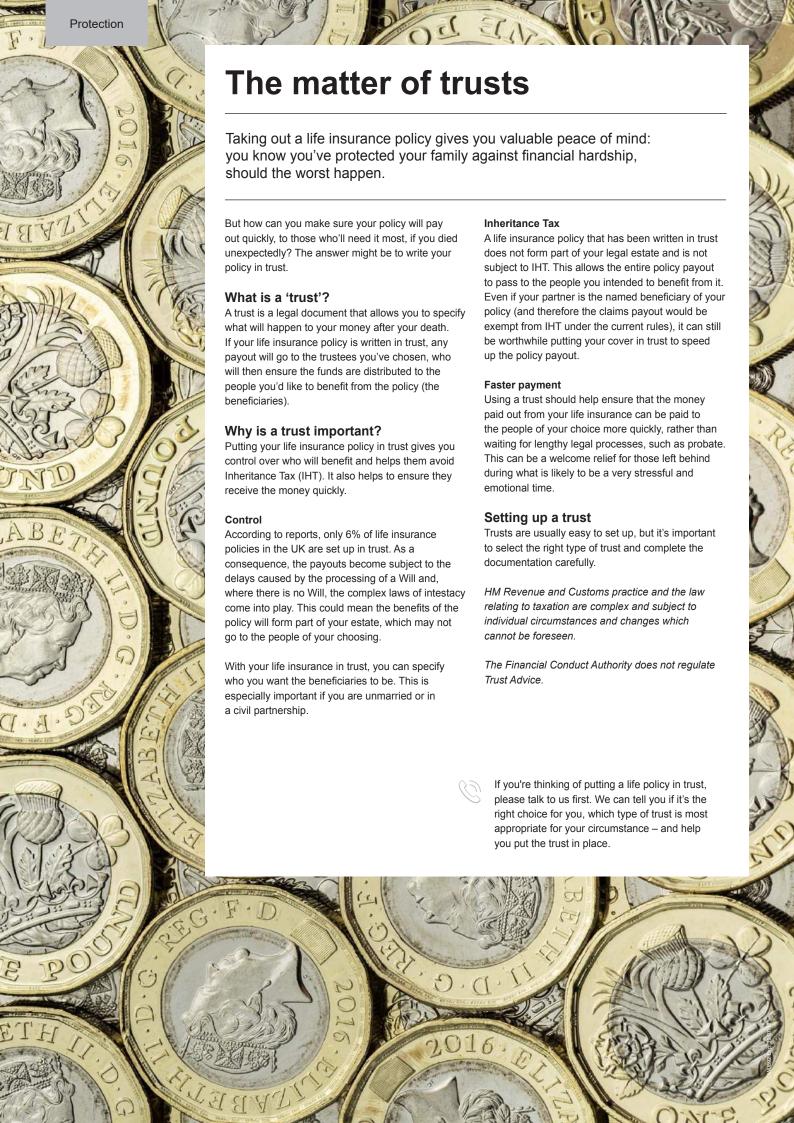

If you choose a fixed rate mortgage, you'll need to decide how long you want your fixed rate to last. Two-year fixed rate mortgages typically offer the lowest initial interest rate. If you want to fix your interest rate for longer, you will probably pay more for that longer-term security. This may be worthwhile in return for predictable repayments, or you might choose to take the lower rate for a shorter timeframe if you expect that your financial position will improve by the time the deal ends.

A change in circumstances could cost you

Do you have any *known* changes on the horizon that will have an impact on your mortgage?

With a fixed rate mortgage, you could face an early repayment charge if you repay all or a certain percentage of the mortgage during the fixed rate period.

If you have no known changes and want to benefit from a longer period of security, then a longer term fixed rate of five years may appeal. It might cost more initially, but you'll benefit from knowing that your budget is fixed for that period.

Why crowdfund the cost of your healthcare?

Crowdfunding is becoming increasingly common among people who need healthcare that's not freely available through the NHS.

To discuss critical illness protection for you and your family, please get in touch.

Websites such as justgiving.com, crowdfunder.co.uk and gofundme.com are full of campaigns from families trying to raise funds for treatments, or seeking help to avoid the financial hardships that a serious illness such as cancer or stroke can cause.

Even though the vast majority of proven effective treatments for cancer are funded by the NHS, 2,348 crowdfunding campaigns to cover medical treatment were launched on JustGiving in 2016, a seven-fold increase from the year before when there were just 304.

One fundraising charity, Tree of Hope, specialises in helping these young people and their families by running campaigns to raise the funds they need to pay for specialist care.

Supporting young people

Although cancer in young people is rare, it is still the most common cause of death for children aged up to 15. Sadly, 1 child in every 500 under 15 is diagnosed with a form of cancer and 2,200 teenagers and young adults (15-24 years old) are diagnosed every year.

Don't rely on crowdfunding

Instead of crowdfunding at a time when you should be concentrating on treatment and recovery, taking out a critical illness plan will help protect a breadwinner from the financial impact that the diagnosis of a serious illness could have on their life or their family's life.

Many critical illness policies also include cover for children (including step and legally adopted) as an automatic benefit. This can pay out a lump sum if a child is diagnosed with a specified critical illness or is hospitalised.
